

As you are no-doubt aware, in National & International Arena, things/progressions are slow in terms of Complex Dynamics governed by the Abstract Mathematics of Topological/(Line-Segment) Graph Theory! While keeping our links with Dr. Apurva Narayan, Assistant Professor University of Western Ontario, London, Ontario, Canada & Adjunct Assistant Professor, Department of Systems Design Engineering, University of Waterloo, Waterloo, Ontario, Canada, intact, We have forged a willing and active collaborative link with Carnegie Mellon University through Prof. (Dr.) Rima Mehta in the field of Softbotics (Artificial Intelligence & Robotics, since the early 1960s in the fast growing field of Agroecology, dating back to rather primitive "Bluetooth" Technology of Yore). Through these National & International cooperative endeavours, we already have Five Patent Awards, within a short span of a year or so, besides several research publications in Journals of Repute Nationally & Internationally.

Nothing Succeeds like Success!!! Please do not Despair! (Nature has Infinite Variety!!)
